## MEMORANDUM OF UNDERSTANDING TO CO-ORDINATE DTT FREQUENCY PLANS

**BETWEEN**

**THE OFFICE OF COMMUNICATIONS of the United Kingdom of Great Britain and Northern Ireland**

**AND**

**THE COMMISSION FOR COMMUNICATIONS REGULATION of Ireland**

## Introduction

This Memorandum of Understanding (MoU) is made between the Office of Communications ("**Ofcom**") and the Commission for Communications Regulation ("**ComReg**"), together referred to as "**the Administrations**", and is the result of many co-operative bilateral and technical coordination meetings between the Administrations. The Administrations enter into this MoU pursuant to their statutory functions to manage the radio frequency spectrum in their respective jurisdictions.

The purpose of this MoU is to co-ordinate the Digital Terrestrial Television ("**DTT**") frequency plans of the United Kingdom of Great Britain and Northern Ireland and of Ireland, in order to facilitate the migration of existing DTT services out of the 694 – 790 MHz radio frequency band ("**700 MHz band**") in both jurisdictions.

This MoU sets out the maximum agreed technical parameters for the radio frequencies (in the 470 – 694 MHz band) which will be used to provide DTT services in both jurisdictions, following the migration of DTT services from the 700 MHz band in both jurisdictions.

This MoU will revoke and replace the "Band IV/V Bilateral Co-ordination Agreement between the Administrations of Ireland and the United Kingdom of Great Britain and Northern Ireland" dated 1st June 2012 (the "**800 MHz Bilateral Agreement**") at the end of the Transition Period.

Unless otherwise defined, terms and definitions used in this MoU are as described in Chapter 1 of the ITU Radio Regulations.

## Articles to this MoU

1. This MoU comes into effect on the date on which it is signed by the authorised representatives of both Administrations.

2. This MoU, upon coming into effect, may only be subsequently amended or abrogated with the consensus of both Administrations. If either Administration proposes to amend or abrogate the MoU, it shall first notify the other Administration of the proposal in writing and shall then await the response of the other Administration as to whether the other Administration consents to the proposed amendment or abrogation, to be given within a reasonable timescale. Subject to both Administrations consent, the amendment or abrogation shall be set out in writing and shall be signed by authorised representatives of both Administrations and this MoU shall thereafter be read and interpreted in accordance with the amendment or abrogation.

3. Annex 1 to this MoU sets out the maximum agreed technical parameters (TVD files) and antenna templates (PLT files) for the radio frequencies (in the 470 – 694 MHz band) which will be used to provide DTT services, in the United Kingdom of Great Britain and Northern Ireland and in Ireland, following the migration of DTT services out of the 700 MHz band in both jurisdictions.

4. Annex 2 to this MoU sets out the planning principles for the migration of DTT services from the 700 MHz band in both jurisdictions.

5. Annex 3 and Annex 4 to this MoU provide supporting information relating to the technical parameters set out in Annex 1.

6. The "Transition Period" means the period of time during which DTT services in the United Kingdom of Great Britain and Northern Ireland and in Ireland will migrate out of the 700 MHz band.

7. The Transition Period will begin on the date this MoU comes into effect and will end, with reasonable effort, no later than 30th June 2020.

8. The Administrations agree that assignments brought into use in the 470 – 694 MHz band, during the Transition Period and thereafter, will be in conformity with the technical characteristics and principles set out in this MoU.

9. The 800 MHz Bilateral Agreement will be revoked and replaced in its entirety by this MoU at the end of the Transition Period. To the extent that the 800 MHz Bilateral Agreement remains applicable during the Transition Period, such as when assignments have not yet been brought into use, rights of use for spectrum which are utilised in conformity with that agreement will be protected until the Transition Period has ended.

10. The Administrations acknowledge that, where appropriate, separate arrangements will be required for the use of Channel 55 and Channel 56 (742 – 758 MHz) for DTT services following the Transition Period; these separate arrangements will be set out in a separate MoU.

11. The Administrations will continue to cooperate and work toward ensuring the development of their DTT networks consistent with the GE06 Agreement[1].

This MoU is hereby signed in London, UK and entered into on the **24th March 2017:**

Signed on behalf of ComReg:

.....

**Dr Samuel Ritchie**
Spectrum Advisor to ComReg, Market Framework Division

Signed on behalf of Ofcom:

.....

**Philip Marnick**
Group Director, Spectrum Group, Ofcom

[1] "GE06 Agreement" means the "Regional Agreement, Geneva 2006 Plan Modification and Notification Procedures", as amended, published by the ITU

## Annexes to the MoU

**Annex 1:** **Record of technical (TVD files) and antenna template (PLT files) details**

**Annex 2:** **Ireland/UK Planning Principles for the 700 MHz DTT Clearance**

**Annex 3:** **Record of the co-ordination spreadsheet for the 700 MHz DTT clearance for Ireland (Tech03 IRL Final Rev65)**

**Annex 4:** **Record of the co-ordination spreadsheet for the 700 MHz DTT clearance for the United Kingdom of Great Britain and Northern Ireland (Tech04 UK Final 7v019)**
