- ▲ The operator's data did not meet publication requirements
- The operator is not required to report this measure
- \* An indirect access operator may sometimes depend on another operator to resolve the customer's issue and this may influence their performance result

## Participating Operators

Seven fixed Line operators have submitted performance data for this report.

- Cable and Wireless<sup>1</sup>
- Chorus
- eircom
- Energis
- Esat BT
- MCI
- ntl

For more detailed information  
This leaflet provides a snapshot of operator quality of service performance data. A more detailed report on operator quality of service performance is available online at [www.comreg.ie](http://www.comreg.ie)

<sup>1</sup> The focus of Cable & Wireless business activity is on new technology products and services that are not currently published under this programme

JULY - DECEMBER 2002

This leaflet is designed to provide consumers with quality of service performance results for leading operators in the Irish business and residential fixed telephony market.

These performance results relate to the periods from July to September 2002 (Q3) and October to December 2002 (Q4). Measures include:

- orders completed on or before the date promised by the operator;
- faults cleared on or before the date promised by the operator;
- complaints processed within 28 days.

What types of services are included?

Direct Access: this is where a customer uses one operator for line rental and making calls.

Indirect Access: this is where a customer uses one operator (a direct access operator) for line rental and another operator (the indirect access operator) for making calls.

Leased Lines: this is a single dedicated connection between two (or more) business customer sites.

Mobile services are not included in this leaflet.

What other factors should I consider when comparing results?

The purpose of this leaflet is to provide you with a guide on operators' performance at a particular point in time. In evaluating and comparing these results you should consider other relevant factors such as the length of the operators promise time, operator size, target market, supplier relationship and coverage area.

Is any other quality of service information available?

A more detailed report for this period containing further performance data, information about the range of services each operator provides and an outline of how quality of service performance is measured is available on the ComReg website ([www.comreg.ie](http://www.comreg.ie)). The website also contains a further report which provides quality of service performance results for the supply of regulated services from eircom to other licensed operators and for public payphones.

How accurate and reliable is this information?

All published measures have been subjected to a two level audit. The first audit assesses the accuracy of the data. A subsequent comparability review examines whether the data is comparable across operators.

## BUSINESS MARKET RESULTS

In evaluating these results you should take factors into account such as operator promise times, target market, coverage and supplier relationship.
