Irish Communications Market

Quarterly Key Data Report

Data as of Q1 2017

Reference: ComReg 17/50
Version: Final
Date: 08/06/2017
# Table of Contents

SUMMARY ............................................................................................................. 6

Notes to data: ........................................................................................................ 8

1. OVERALL MARKET DATA ........................................................................... 10

1.1 Overall Electronic Communications Revenues ........................................... 10

1.2 Overall Call Volumes .................................................................................. 11

1.3 Communications and the Consumer Price Index ........................................... 12

1.4 Fixed and Mobile Market Retail Voice, Internet and TV Subscriptions ....... 13

2. FIXED MARKET DATA ................................................................................... 15

2.1 Fixed Line Revenues .................................................................................. 15

2.1.1 Authorised Operators’ Share of Fixed Line Revenues ................................. 16

2.2 Fixed Line Access Paths and Subscriptions ................................................... 17

2.2.1 Access Paths and VoB Subscriptions ......................................................... 17

2.2.2 Indirect Access Paths ............................................................................... 18

2.2.3 Fixed Voice Subscriptions ...................................................................... 19

2.2.4 Fixed Market Retail Subscriptions by Type .............................................. 20

2.3 Fixed Voice Call Volumes ........................................................................... 21

2.4 Fixed Number Portability ........................................................................... 23

2.5 Standalone Fixed Voice Service Pricing Data ............................................ 25

3. BROADBAND SERVICES ............................................................................ 30

3.1 Total Broadband Subscriptions and Provision of Broadband Services ........ 30

3.2 Provision of DSL Access ........................................................................... 38

3.3 Provision of VDSL Access ....................................................................... 39

3.4 Usage of Broadband Services ................................................................... 40

3.5 Broadband Penetration ........................................................................... 42

3.6 Wi-Fi Broadband Access ........................................................................ 44

3.7 Fixed and Mobile Broadband Pricing Data .............................................. 45

4. MOBILE MARKET DATA .......................................................................... 54

4.1 Number of Subscriptions and Penetration Rate ....................................... 54
4.2 The Profile of Mobile Subscriptions in Ireland ...................................................56
4.3 Mobile Volumes ....................................................................................................60
4.4 Mobile Revenues ..................................................................................................64
4.5 Average Monthly Revenue per User ...................................................................65
4.6 Machine to Machine Subscriptions .....................................................................66
4.7 Competition in the Mobile Market ......................................................................68
4.8 Switching in the Mobile Market ...........................................................................70
4.9 Mobile Pricing Data ............................................................................................70

5. BROADCASTING .......................................................................................77

5.1 Overall Broadcasting Market ..............................................................................77

6. APPENDIX ...........................................................................................................82

Corrigendum to Q1 2017 Report

Four operators informed ComReg about incorrect historically provided information:

Note 1: Fixed line retail revenues were revised for Q4 2016 following a revision by Fastcom with this revision totalling -€1K. This in turn affected total retail market revenues.

Note 2: Fixed line wholesale revenues were revised for Q4 2016 following a revision due to a ComReg data transposition issue with this revision totalling +€171K.

Note 3: Fixed voice minutes were revised for Q4 2016 following a revision by Three with this revision totalling -352K minutes.

Note 4: Mobile voice minutes were revised for Q3 2016 and Q4 2016 following a revision by Lycamobile with such revisions ranging from -14K to -667K minutes.

Note 5: Single play internet subscriptions and double play fixed telephony and internet subscriptions were revised for Q4 2016 following revisions by Three with these revisions amounting to -407 and -248 respectively. This in turn affected total fixed subscriptions (totalling -655) and fixed voice subscriptions (-248). Broadband subscriptions were not impacted.

Note 6: Mobile broadband subscriptions were revised from Q3 2016 to Q4 2016 inclusive following revisions by Meteor due to historically provided information with such revisions ranging from +4,684 to +7,153. These revisions in turn inversely impacted mobile subscriptions (exc. Mobile broadband and M2M) with such revisions ranging from -4,684 to -7,153.

Summary

Comparing Q4 2016 to Q1 2017 overall industry retail revenues decreased by 3.0%. Total retail revenues in the twelve months to March 2017 at €3.090 billion were up from €3.045 billion over the 12 months previous. There were 1,372,898 fixed broadband subscriptions this quarter which was an increase of 0.9% from Q4 2016 and an increase of 3.9% compared to Q1 2016. Overall voice traffic volumes decreased by 2.2% this quarter. Presented below is a tabular summary of the data presented throughout this Quarterly Key Data Report.

¹ Mobile and fixed line wholesale revenues are excluded from this figure.
² Fixed line retail revenues were revised for Q4 2016. See note 1 within the corrigendum.
³ Fixed line wholesale revenues were revised for Q4 2016. See note 2 within the corrigendum.
⁴ Fixed voice minutes were revised for Q4 2016. See note 3 within the corrigendum.
⁵ Mobile Voice minutes were revised for Q3 2016 and Q4 2016. See note 4 within the corrigendum.
⁶ Fixed subscriptions and fixed voice subscriptions were revised for Q4 2016. See note 5 within the corrigendum.
⁷ Mobile broadband subscriptions and mobile subscriptions (exc. Mobile broadband and M2M) were revised for Q3 2016 and Q4 2016. See note 6 within the corrigendum.
Overall electronic communications network and service retail revenues at the end of March 2017 were over €763 million for the quarter. Industry retail revenues declined by 3.0% this quarter but increased by 2.2% compared to Q1 2016.

At the end of March 2017 there were 1,479,132 fixed voice subscriptions in Ireland, an increase of 0.3% since last quarter and an increase of 0.2% since Q1 2016.

Total voice traffic minutes decreased by 2.2% this quarter and were 2.7% lower than in Q1 2016. Mobile minutes form the majority of voice minutes at 76.0%, with fixed minutes representing the remaining 24.0%. Mobile voice minutes decreased by 1.3% while fixed voice minutes decreased by 5.0% this quarter.

Fixed broadband subscriptions increased by 0.9% this quarter and were up by 3.9% compared to Q1 2016. VDSL\(^8\) (up by 5.4%), FWA (up by 1.8%), cable (up by 0.3%) and FTTP\(^9\) subscriptions (up by 58.4%) increased this quarter while DSL\(^10\) (down by 4.8%), satellite (down by 1.4%) and mobile broadband (down by 2.2%) all fell this quarter.

The estimated fixed broadband household penetration rate\(^11\) was 70.4% in Q1 2017. The fixed broadband per capita penetration rate was 29.1%. The broadband per capita penetration rate (including mobile broadband) was 36.5%.

Average fixed broadband speeds continue to increase. In Q1 2017 approximately 79.2% of all fixed broadband subscriptions were equal to or greater than 10Mbps up from 74.1% in Q1 2016\(^12\). 67.0% of all fixed broadband subscriptions were equal to or greater than 30Mbps, up from 58.1% in Q1 2016.

At the end of March 2017 there were 5,953,122 mobile subscriptions (including mobile broadband and M2M) in Ireland, a decrease of 0.3% since the last quarter. The mobile penetration rate was 126.3% including mobile broadband and M2M subscriptions and 103.9% excluding mobile broadband and M2M subscriptions.

---

\(^8\) VDSL refers to very-high-bit-rate digital subscriber line. These lines are typically utilised in the provision of next generation broadband services.

\(^9\) FTTP (fibre to the premises) refers to a range of fibre access installations such as fibre to the home (FTTH), fibre to the premises (FTTP) and fibre to the curb.

\(^10\) DSL refers to a digital subscriber line, the means by which broadband speeds (i.e. in excess of 144k downstream) are delivered over the copper telecoms network.

\(^11\) This estimate excludes business subscriptions and mobile broadband subscriptions.

\(^12\) Note: The method employed for calculating broadband speeds changed in Q2 2016 and applied retrospectively.
• The number of voice and data subscribers using 3G/4G networks decreased to 4,278,646 this quarter, down by 1.4% from Q4 2016 but up by 5.7% compared to Q1 2016.

• There were 460,910 gross additions in the number of mobile subscriptions. Of these, 91,128 were subscriptions with ported numbers. On average, there were 91,713 numbers ported and 508,945 total gross additions per quarter over the last 12 months.

• In Q1 2017 mobile ARPU was €22.11 per month, down from €24.12 per month in Q1 2016. Declining mobile ARPU is likely to be a reflection of a number of factors such as those attributable to increased sales of bundled products (combining mobile with fixed calls, broadband and TV) and reductions in mobile roaming and termination rates, among others.

Notes to data:

• FWA broadband traffic reported for Q4 2016 is partially based on an estimate from Imagine Telecommunications Business Limited due to issues with reporting accurate data for this metric.

• Cable broadband traffic reported from Q3 2015 to Q1 2017 is based on an estimates from Virgin Media Ireland Limited due to issues with reporting accurate data for this metric.

• As of Q4 2016 FTTP and satellite subscriptions have been broken out from the previously reported ‘Other’ category. Additional subscriptions for FTTP (fibre to the premises, including fibre to the home (FTTH) and fibre to the curb) are included from Q3 2016.

• As of Q2 2016 two new mobile operators have been included, ID and Virgin Media.

• As of Q3 2015 additional leased line revenue information is available from three operators. One operator has provided additional information on Wi-Fi services. Hence, information since that quarter is not strictly comparable with data published in previous periods.

• As of Q2 2015 mobile to mobile voice traffic between O2 and Three is treated as on-net traffic.
• As of Q4 2014 a more precise breakdown of business versus residential fixed subscriptions (fixed voice and fixed broadband subscriptions) is available following an operator upgrade of its reporting systems.

• Following the completion of the Three’s acquisition of O2, Three, O2 and 48 brands are reported under the umbrella of the Three Group as of Q2 2014.

• Both Meteor and Eir mobile brands are reported under the umbrella of Eir Group Mobile.

• Sky Ireland’s TV subscriptions and TV revenues are not included in this report. Sky Ireland’s distribution of subscriptions by type (single play, double play or triple play) is instead estimated using the percentage distribution of Sky Ireland’s subscriptions as obtained from market survey data conducted by Behaviour & Attitudes Ltd on behalf of ComReg. For more details on survey method, see the Appendix on page 82.

• Irish population estimates of 4,712,200 and an estimated household number of 1,720,500 are used in this report. These statistics are obtained from the Central Statistics Office (CSO) Quarterly National Household Survey (QNHS) Q1 2017.

• A number of external sources are used for international comparisons. These include the CSO, Analysys Mason, and Strategy Analytics (Teligen).

• In most cases data has been rounded to one decimal place in this report.

• Not all charts in this report may sum exactly to 100% due to rounding.

• While quarter on quarter comparisons are made in the report, definitive conclusions with regard to trends cannot be drawn from this and year on year comparisons are used to improve the reliability of the analysis.

• Further explanations and descriptions of data supplied in this report can be found in the accompanying explanatory memorandum 17/50a.

• Extracts of data used in this report can be downloaded at http://www.comreg.ie/industry/electronic-communications/data-portal

• Data previously published may have been amended since publication. Any such amendments are noted in the corrigendum notice on page 5 of this report.
1. Overall Market Data

Data presented in this Quarterly Key Data Report is based on questionnaires completed by certain authorised operators for the period from 1 January to 31 March 2017. The report is based on submissions from 41 active operators.

1.1 Overall Electronic Communications Revenues

Figure 1.1.1 shows the developments in revenues attributable to the provision of fixed line, mobile and certain TV broadcasting services. Total industry retail revenues decreased by 3.0% this quarter but increased by 2.2% compared to Q1 2016. The quarterly decrease in retail revenues was driven by decreases in mobile retail revenues. Mobile revenues accounted for 49.4% of total industry retail revenues followed by fixed line (46.3%) and broadcasting (4.3%) revenues. Over the twelve months to March 2017, total retail revenues were over €3.090 billion.

According to the CSO, Ireland’s Gross National Product for Q4 2016 was approximately €54.5 billion. Based on the Q4 2016 retail revenue data reported to ComReg by operators in the Irish communications sector, these revenues were approximately 1.4% of GNP in that quarter.

13 Operators who generate in excess of €500,000 in retail and/or wholesale revenues from electronic communications networks and services per annum.
14 See table A2 in the Appendix on page 84 for the list of respondents who submitted data to ComReg.
15 Further detail on terms and definitions - ComReg Doc. 17/50a Explanatory Memorandum.
16 Q4 2016 is the latest period for which GNP data is available.
This quarter, mobile retail revenues decreased by 6.1% and decreased by 0.8% compared to Q1 2016. Fixed line retail revenues increased by 0.4% this quarter and increased by 7.6% compared to Q1 2016. Broadcasting (Cable/IPTV) retail revenues decreased by 1.8% this quarter and declined by 14.8% compared to Q1 2016. The broadcasting network retail revenues in this report only capture Cable/IPTV revenues and thus, exclude Sky Ireland’s satellite TV revenues and all content-related revenues.\(^{17}\)

### 1.2 Overall Call Volumes

**Figure 1.2.1 – Fixed and Mobile Voice Call Volumes (Minutes)\(^ {18}\)**

Figure 1.2.1 profiles volumes of originating voice calls by call type on both fixed and mobile networks on a quarterly basis. There was a decrease in total voice minutes this quarter. Voice minutes for Q1 2017 totalled 4.05 billion minutes, there were 16.52 billion minutes in the twelve months to the end of March 2017. Total voice minutes decreased by 2.2% from the previous quarter and decreased by 2.7% since Q1 2016.

It should be noted that managed VoB minutes are included with calls originating from fixed networks in figure 1.2.1, and are split according to the same call categorisations (i.e. domestic, international, mobile, other).

---

\(^{17}\) ComReg captures Cable/IPTV revenues from a number of TV providers for publication in the Quarterly Key Data Report under broadcasting revenues. The collection and publication of licence fee and/or television advertising revenues does not fall within ComReg’s remit and therefore, is not included in the broadcasting revenue figure.

\(^{18}\) Fixed advanced minutes include premium rate services minutes, freephone minutes, payphone minutes, operator services minutes, national and international virtual private network minutes. Mobile advanced minutes include premium rate services minutes and other mobile minutes such as voicemail, DQ, call completion minutes etc.
Mobile originating voice minutes (down 0.003% on Q1 2016) accounted for 76.0% of all voice minutes in Q1 2017 (compared to 74.0% in Q1 2016) while traffic originating on fixed line networks (down 10.3% on Q1 2016) accounted for the remaining 24.0% of all voice minutes (compared to 26.0% in Q1 2016). Figure 1.2.2 shows total voice traffic in Ireland at the end of Q1 2017.

**Figure 1.2.2 – Total Voice Traffic**

**1.3 Communications and the Consumer Price Index**

Figure 1.3.1 shows the monthly change in the Consumer Price Index (CPI) and the communications sub-component from March 2015 to March 2017. In January 2015, the CSO revised its weighting for the communications basket to 3.030% of the total CPI, up from 2.932% previously.\(^{19}\)

Using December 2011 as the base period, communications prices have generally decreased over the last 12 months with a more stable trend in recent months. Communication prices have decreased by 1.4 base points while the overall CPI increased by 0.7 of a percentage point since March 2016.

---

1.4 Fixed and Mobile Market Retail Voice, Internet and TV Subscriptions

Figure 1.4.1 shows the total number of mobile voice and data subscriptions (also reported in section 4.1) and the estimated number of fixed subscriptions to voice, internet and TV services (both single play and bundled subscriptions) in Ireland.

Customers purchasing either a single fixed service or more than one service (as part of a bundle) are included in the fixed subscriptions category. Total mobile subscriptions have decreased by 0.3% since Q4 2016 and total fixed subscriptions decreased by 0.6% over the same period. It should be noted that it is possible that a customer may have more than one subscription, particularly where a mobile customer has more than one SIM card or in the case of a business customer with multiple fixed line subscriptions across several offices.
Figure 1.4.1 – Total Subscriptions (Fixed and Mobile)
2. Fixed Market Data

2.1 Fixed Line Revenues

Figure 2.1.1 shows the profile of fixed line retail revenues in Ireland over the last two years. Total fixed line retail revenues for Q1 2017 were over €353 million. This was an increase (0.4%) on Q4 2016 revenues and a 7.6% increase on Q1 2016 revenues.

Retail broadband revenues (+29.0%) as well as retail leased lines, managed and other data services revenues (+12.4%) have risen since Q1 2016 while retail fixed voice revenues have fallen (-6.8%).

Comparing Q1 2016 to Q1 2017, the proportion of retail fixed line revenues attributable to retail leased lines, managed data and other advanced data services increased by 1.1 percentage points to 24.8% while retail broadband revenue’s share increased by 4.3 percentage points to 32.9%. The proportion of retail fixed voice revenues fell by 6.5 percentage points to 42.2% of overall fixed line retail revenues.

Figure 2.1.1 – Profile of Fixed Line Retail Revenues

Fixed line wholesale revenues were over €138 million in Q1 2017, the majority of which were related to interconnect and wholesale fixed narrowband access revenues, followed by wholesale leased lines, managed and other data services revenues and wholesale

---

20 As noted on page 8, additional leased line revenue information is available from three operators since Q3 2015. Hence, revenue and market share information in Figures 2.1.1 and 2.1.1.1 and 2.1.1.2 is not directly comparable to information in previous periods.

21 Fixed line retail revenues were revised for Q4 2016. See note 1 within the corrigendum.
broadband access revenues. Wholesale revenues decreased by 1.3% compared to Q4 2016 and were down by 6.8% since Q1 2016.

### 2.1.1 Authorised Operators’ Share of Fixed Line Revenues

Figure 2.1.1.1 below outlines the revenue shares for the fixed retail market (comprising narrowband, broadband, leased line, managed and other data revenues) held by the incumbent fixed line operator (Eir), authorised operators having at least a 2% market share, and all other authorised operators (OAOs) with market share less than 2%.

In Q1 2017, Eir had the highest retail revenue share in the fixed retail market with 42.7% market share. Virgin Media had 14.4%, followed by Vodafone (fixed only) with 14.6%, Sky Ireland (5.2%), BT (5.0%) and Verizon (2.0%). OAOs accounted for the remaining 16.2%.

**Figure 2.1.1.1 – Fixed Retail Revenue Market Shares**

Figure 2.1.1.2 outlines the revenue shares in the fixed market (comprising fixed line retail and wholesale revenues). When making comparisons, it is important to note that the market shares presented below are based on shares across all fixed wholesale and retail revenue streams and some operators may not offer products and services across all segments of these markets.

---

22 Wholesale revenues were revised for Q4 2016. See note 2 in the corrigendum of this report.

23 In Q3 2016 and Q4 2016 Magnet had a market share revenue greater than 2%, therefore it is not included in the OAO category in those periods but returned to it in Q1 2017. In Q3 2016 AT&T had a market share below 2% and since then has been included in the OAO category.
In Q1 2017, Eir had the highest revenue market share with 47.5%. ComReg estimates that the next four largest operators (BT, Vodafone (fixed only), Virgin Media and Sky Ireland) contribute a further 36.4% share of total (retail and wholesale) industry revenue, while OAOs account for the remaining 16.1%.

**Figure 2.1.1.2 – Fixed Revenue Market Shares**

![Fixed Line Market Shares (Wholesale and Retail Revenues) Q1 2016 - Q1 2017](chart)

**2.2 Fixed Line Access Paths and Subscriptions**

**2.2.1 Access Paths and VoB Subscriptions**

Figure 2.2.1.1 presents the total number of narrowband copper fixed access paths (PSTN and ISDN) and Voice over Broadband (VoB) subscriptions. PSTN and ISDN access paths are usually used for voice services and internet access. There were over 1.44 million direct and indirect PSTN and ISDN access paths in the Irish market in Q1 2017. This represents a decrease of 1.0% on last quarter and a decline of 3.2% since Q1 2016. The number of PSTN access paths has decreased by 1.0% from last quarter and declined by 2.9% since Q1 2016. The number of ISDN access paths decreased by 1.4% since Q4 2016 and decreased by 4.5% since Q1 2016. At the same time, the number of VoB subscriptions increased by 0.9% since Q4 2016 and rose by 2.4% since Q1 2016.

---

24 Access paths are not synonymous with access lines as for example in the case of ISDN paths, there may be more than one path provided via a single ISDN line.

25 Indirect access paths relate to telephone lines provided to customers by means of Carrier Pre-select (CPS), Wholesale Line Rental (WLR) or Switchless Voice (SV). CPS allows the user to receive all or a portion of calls from one provider and line rental from another provider (usually Eir). SB-WLR (also known as Single Billing-WLR) allows the user to receive every aspect of telephone service, including all calls and line rental from one single supplier. SV also known as White Label Access-Voice Access (WLA-(Voice)) is a switchless voice service which allows an operator to purchase end-to-end call services without the need to have its own interconnection infrastructure.

</tbody>
</table>

Figure 2.2.1.2 presents the total number of narrowband fixed access paths broken out by direct and indirect access as well as the number of VoB subscriptions. In Q1 2017, indirect access accounted for 40.4% of all narrowband access paths in the fixed line market.

Figure 2.2.1.2 – Direct & Indirect Narrowband Fixed Access Paths and VoB Subscriptions

2.2.2 Indirect Access Paths

Figure 2.2.2 illustrates the overall number of indirect PSTN and ISDN paths provided by means of either Carrier Pre-Selection (CPS) only, Single Billing Wholesale Line Rental (SB-WLR) and White Label Voice Access (WLA). In Q1 2017, there were 583,111 indirect access paths in Ireland. The number of indirect access paths decreased by 0.8% this quarter and declined by 0.3% in the year to Q1 2017.
The data indicates that OAOs continue to migrate their customer base to single-bill services, i.e. SB-WLR or WLA rather than CPS only (i.e. a calls only service, excluding line rental). SB-WLR used by OAOs now accounts for 60.1% of indirect access paths compared to 69.8% in Q1 2014. WLA paths account for 37.4% of total indirect access paths compared to 26.1% in Q1 2015. The share of CPS only indirect access paths has declined by 1.7 percentage points in the last two years and now accounts for 2.5% of overall indirect access paths.

**Figure 2.2.2 – Narrowband Indirect Access Paths**

![Carrier Pre-Select, Wholesale Line Rental and White Label Access Paths](chart)

**2.2.3 Fixed Voice Subscriptions**

Figure 2.2.3 shows the estimated number of retail customers/subscriptions to fixed voice services (either standalone or as part of a bundle) and operators’ market shares based on these subscriptions. At the end of Q1 2017 there were 1,479,132 fixed voice subscriptions (an increase of 0.3% since Q4 2016 and an increase of 0.2% on Q1 2016). As of Q1 2017 Eir had 39.3% of all fixed voice subscriptions followed by Virgin Media (23.9%), Vodafone (15.0%), Sky (11.6%), Pure Telecom (3.3%) and Digiweb (2.4%). OAOs accounted for the remaining 4.4% of fixed voice subscriptions.
2.2.4 Fixed Market Retail Subscriptions by Type

Figure 2.2.4 shows the estimated proportion of retail customers/subscriptions to fixed line telephony services (mobile is excluded from single play subscriptions, but included when part of a bundle e.g. double/triple/quad play) broken out by those with a single service and those taking a bundle of two or more services as of Q1 2017 (subscriptions mean a customer with at least one contract with an electronic communications service provider). Single play subscriptions include fixed line services only (including standalone cable TV and IPTV services) which means that standalone mobile voice, standalone mobile broadband and standalone satellite TV subscriptions are excluded from this figure.

It is estimated that there were 1,795,140 fixed market retail subscriptions in Q1 2017 across both business and residential customers (a business customer may have multiple subscriptions). Q1 2017 saw an increase in triple and quadruple play subscriptions when compared to Q4 2016. In Q1 2017 36.4% of fixed market retail subscriptions were single play compared to 38.8% in Q1 2016. Similarly, 37.5% of subscriptions were double play (a bundle of two services) compared to 35.9% in Q1 2016 and 26.1% were triple play. 26 Double play subscriptions can refer to either fixed telephony and internet or television or mobile telephony; television and the internet; mobile telephony and internet or television subscriptions. Triple play subscriptions can refer to fixed telephony and internet and television; fixed telephony and mobile telephony and internet; fixed telephony and mobile telephony and television; or, mobile telephony and internet and television subscriptions. Quadruple play subscriptions refer to fixed telephony, internet, television and mobile subscriptions.
a combination of triple play (a bundle of three services) and quadruple play (a bundle of four services) compared to 25.4% in Q1 2016.

**Figure 2.2.4 – Fixed Market Retail Subscription Type**

2.3 Fixed Voice Call Volumes

Fixed voice traffic in Q1 2017 was just over 0.97 billion minutes, which was a 5.0% decrease on Q4 2016 and a fall of 10.3% since Q1 2016.

Managed voice over broadband (VoB) minutes account for approximately 17.8% of total fixed voice minutes up from 17.5% in Q1 2016.

The numbers quoted in this QKDR report represent managed VoB services only (for example by Eir, Virgin Media and other providers such as Blueface) and do not include unmanaged or over-the-top VoB services offered by providers such as Skype.

It should be noted that the split of managed VoB minutes by category (i.e. domestic, international, mobile, other) is placed into those respective fixed minutes categories in figures 2.3.1, 2.3.2 and 2.3.3.

---

27Sky Ireland do not provide information on TV subscriptions. Sky Ireland’s distribution of subscriptions by type (single play, double play or triple play) is estimated using the percentage distribution of Sky Ireland’s subscriptions obtained from the market survey data conducted by Behaviour & Attitudes Ltd. on behalf of ComReg. For more details on the survey method, see the Appendix on page 82.
Figure 2.3.1 shows the breakdown of fixed voice call volumes by call type. Domestic fixed to fixed minutes accounted for 46.4% of all fixed voice traffic in Q1 2017. International outgoing minutes accounted for 22.8% of all fixed voice traffic. The share of fixed to mobile minutes was 14.5% while other/advanced minutes (which include premium rate minutes) represented 16.3% of all fixed voice traffic.

**Figure 2.3.1 – Fixed Voice Call Volume (Minutes)**

![Fixed Voice Call Volumes (minutes 000s), Q1 2015 - Q1 2017](chart)

Figures 2.3.2 and 2.3.3 show the change in the average monthly fixed voice call minutes per business and residential subscribers respectively. In Q1 2017 the average business subscriber made 810.9 minutes of voice calls. The average residential subscriber usage was 114.5 minutes per month.

---

28 Domestic Calls include local & national calls. Advanced service and other minutes include minutes to premium rate numbers, freephone numbers, callsave, operator services, VPN minutes, payphones and other services.
2.4 Fixed Number Portability

Figure 2.4.1 illustrates the number of fixed numbers (geographic and non-geographic) ported between Irish fixed voice service providers since Q4 2013. Fixed Number Portability (FNP) allows consumers to switch fixed voice provider while retaining their fixed number.
In the quarter to March 2017, 21,068 numbers \(^{29}\) were ported between operators (101,903 numbers in the twelve months to March 2017). Over the last 12 months, an average of 25,476 numbers have been ported each quarter. ComReg notes a higher than normal quantity in the number of ported numbers in period Q3 2016 as well as for periods Q3 2014 to Q1 2015\(^{30}\).

ComReg notes that the fixed number portability database only records data on customers that retain their telephone number while switching between different fixed voice service providers’ networks. Therefore, porting numbers presented in Figure 2.4.1 should not be considered as a full proxy for switching activity in the fixed voice market as switching between operators using the same underlying network for the provision of fixed voice services (e.g. where a retail customer switches service provider, but both service providers underlying retail services is provided on the same network – as in the case where retail services are provided over the same wholesale network) would not be recorded in the FNP database.

**Figure 2.4.1 – Fixed Numbers Ported**

> Non-geographic number ports constitute less than 1% of total ports for Q1 2017.

> This was due to an audit of the central reference database which records porting activity of fixed numbers.
2.5 Standalone Fixed Voice Service Pricing Data
ComReg uses independently collated Strategy Analytics (Teligen) pricing data using OECD-approved methodologies to examine the relative prices of a number of specific fixed voice usage baskets of national and international telecoms services for both residential and business users. The pricing data used for international comparisons currently includes pricing information for selected countries, namely Germany, Denmark, Spain, Netherlands and the United Kingdom31.

For national comparisons, the prices advertised32 by the largest operators (in terms of number of subscribers to standalone fixed voice services33) during Q1 2017 were analysed34 for selected usage baskets. In this QKDR, standalone fixed voice service prices advertised by Eir, Sky, Digiweb, Pure Telecom and Vodafone were analysed. Thus, the pricing analysis does not necessarily present the lowest prices available in the whole market, but rather the lowest prices offered by the operators having the largest number of subscribers.

For international comparisons, the prices advertised35 by the largest operators (in terms of number of subscribers to standalone fixed voice service) in each of the respective countries during Q1 2017 were analysed36 for selected usage baskets37 (with an average per country price presented based on the average of lowest price tariffs advertised by three highest ranking operators in national pricing comparisons). In order to enable international comparisons, prices are presented in Euro Purchasing Power Parities (PPPs) and exclude VAT charges. PPPs provide an indication of the cost of telecoms services in countries analysed in relation to the cost of all other products and services.

The presented national and international comparison analysis incorporates discounts offered by operators. Nonrecurring charges (e.g. charges for the installation of a service) are discounted/amortised over five years. Fixed recurring monthly costs such as line rental and any other additional recurring charges are included. Calls to fixed, mobile and international destinations are included in the baskets.

31 In future QKDRs ComReg may expand the analysis and include more countries for international price comparisons.
32 The pricing analysis is based on a review of operators’ advertised prices in the period Q1 2017.
33 Standalone fixed voice services are voice services not sold as part of a bundle or other services.
34 The subscribers of these operators jointly account for over 90% of all standalone fixed voice subscribers.
35 The pricing analysis is based on a review of operators’ advertised prices in the period Q1 2017.
36 The subscribers of these operators jointly account for over 80% of all standalone fixed voice subscribers in each of the respective countries.
37 The same basket was applied to each respective country in order to make the international comparison.
The OECD basket methodologies are reviewed and revised periodically, with the latest revision made in early 2010\(^\text{38}\). For more detailed information on basket methodologies see ComReg’s accompanying Memorandum, document 17/50a.

The following baskets are presented in this report\(^\text{39}\):

### Residential and Business Standalone Fixed Voice Service Baskets

<table>
<thead>
<tr>
<th>Type of basket</th>
<th>Basket</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential</td>
<td>60 calls (190 minutes)</td>
</tr>
<tr>
<td>Business</td>
<td>260 calls (606 minutes) basket</td>
</tr>
</tbody>
</table>

These baskets were selected given they most suitably corresponded (amongst the available OECD usage baskets) to the fixed voice usage patterns presented in figures 2.3.2 and 2.3.3 above. ComReg notes that these baskets reflect usage patterns of an average user and do not necessarily reflect prices of tariffs that are geared towards customers having different usage profiles.

ComReg notes that comparisons are based on the prices of advertised tariffs\(^\text{40}\) only and the analysis does not take into consideration other potentially important factors such as quality of the network, level of customer care, additional units of consumption available after having accounted in the analysis for the units in the OECD usage basket, minimum contract term etc.

### OECD Residential Standalone Fixed Voice Service Basket

Figure 2.5.1 compares tariffs advertised by standalone fixed voice service providers for residential customers based on a basket of 60 calls (190 minutes)\(^\text{41}\). Pure Telecom offers the cheapest tariff for this particular basket at €35.86, followed by Digiweb (€40.72) and Sky (€43.25).

---

\(^{39}\) In future QKDRs ComReg may expand the analysis and present price comparisons based on additional and/or different usage baskets.

\(^{40}\) Tariffs publically advertised during Q1 2017.

\(^{41}\) Basket assumes the usage of 150 fixed to fixed minutes, 25 fixed to mobile minutes and 15 international minutes.
Figure 2.5.1 illustrates Ireland’s ranking alongside five other Western European countries with respect to prices for residential standalone fixed voice services. In Q1 2017 Ireland ranked in fourth place with an average price of €32.47 for this particular basket. The average price in Ireland is 8.4% more expensive than the average price for all of the countries included in the analysis.

Figure 2.5.2 illustrates Ireland’s ranking alongside five other Western European countries with respect to prices for residential standalone fixed voice services. In Q1 2017 Ireland ranked in fourth place with an average price of €32.47 for this particular basket. The average price in Ireland is 8.4% more expensive than the average price for all of the countries included in the analysis.

Figure 2.5.2 - Residential Standalone Fixed Voice Basket (International)

42 As noted previously, average prices used for international comparisons exclude VAT charges.

43 The average of prices presented in Figure 2.5.2. Prices include line rental.
OECD Business Standalone Fixed Voice Service Basket

Figure 2.5.3 compares tariffs advertised by standalone fixed voice service providers for business customers based on a basket of 260 calls (606 minutes). Presented prices exclude VAT charges. Vodafone offers the cheapest tariff for this particular basket at €37.

Figure 2.5.3 - Business Standalone Fixed Voice Basket (National)

---

44 In this QKDR only tariffs advertised by Vodafone, Digiweb and Eir were analysed for business customers. This can arise for reasons such as operators not offering fixed voice services to business customers or not advertising prices publicly. ComReg may expand the analysis and include additional operators in the future QKDRs.

45 Basket assumes the usage of 402 fixed to fixed minutes, 116 fixed to mobile minutes and 88 international minutes.
Figure 2.5.4 shows that Ireland (€57.94\textsuperscript{46}) ranks in fourth place. The average price in Ireland is 4.2% cheaper than the average price\textsuperscript{47} for all of the countries included in the analysis.

**Figure 2.5.4 - Business Standalone Fixed Voice Basket (International)**

\textsuperscript{46} As noted previously, average prices used for international comparisons exclude VAT charges.

\textsuperscript{47} The average of prices presented in Figure 2.5.4.
3. Broadband Services

3.1 Total Broadband Subscriptions and Provision of Broadband Services

Figure 3.1.1 shows the total number of broadband subscriptions in Ireland as of Q1 2017. At the end of March 2017, there were 1.72 million active broadband subscriptions in Ireland. This was an increase of 0.3% on the previous quarter and 1.3% increase since March 2016.

There was an increase in total fixed line broadband subscriptions this quarter (up by 17,589) but a decrease in mobile broadband subscriptions (down by 7,754 subscriptions). ComReg reports active dedicated mobile broadband subscriptions and does not include Internet access over mobile handsets within these numbers.

VDSL (up by 5.4%), FWA (up by 1.8%), FTTP (up by 58.4%) and cable subscriptions (up by 0.3%) showed positive growth this quarter. DSL (down by 4.8%), satellite (down by 1.4%) and mobile broadband (down by 2.2%) all fell this quarter. It is likely that some or all of the DSL reductions are accounted for by consumers switching to VDSL based broadband services.

<table>

<td>+0.3%</td>
<td>+1.3%</td>
</tr>
</tbody>
</table>

ComReg notes that the data provided in this section relates to active subscriptions reported by operators. It takes into account multiple active subscriptions to broadband offerings by individual subscribers.

There were also 2,993 narrowband Internet subscriptions in Q1 2017.

VDSL refers to very-high-bit-rate digital subscriber line. These lines are typically utilised in the provision of next generation broadband services.

FTTP (fibre to the premises) refers to a range of fibre access installations such as fibre to the home (FTTH), fibre to the premises (FTTP) and fibre to the curb.

DSL refers to a digital subscriber line, the means by which broadband speeds (i.e. in excess of 144k downstream) are delivered over the copper telecoms network.
Figure 3.1.2 profiles broadband subscriptions in Ireland using the subscription type classifications of outlined in Figure 3.1.1.

**Figure 3.1.2 – Total Broadband Subscriptions**

![Total Broadband Subscriptions](image)

Figure 3.1.3 shows the quarterly growth in fixed and mobile broadband subscriptions since Q1 2015. In general, there has been a steady growth of fixed broadband subscriptions and a decline of mobile broadband subscriptions. It should be noted that ComReg reports on active broadband subscriptions and the mobile broadband subscription numbers reported by ComReg do not include internet access over mobile handsets (such as smartphones).
Since Q3 2016, VDSL subscriptions have accounted for the largest share of broadband subscriptions, (27.1%) with this increasing to 30.6% in Q1 2017. The continuous increase in VDSL subscriptions is likely to be largely accounted for by consumers switching from DSL based broadband services. DSL accounted for 24.1% of all broadband subscriptions in Q1 2017 down from 29.8% in Q1 2016. The share of mobile broadband subscriptions has declined to 20.3% of all broadband subscriptions, down from 22.3% in Q1 2016. Cable has a 21.4% share of all broadband subscriptions down from 21.8% in Q1 2016. FWA has a 2.8% share of broadband subscriptions up slightly from 2.5% in Q1 2016. The remainder consists of satellite with a 0.30% share of broadband subscriptions, slightly down from 0.32% in Q1 2016, while FTTP has a 0.70% share of broadband subscriptions in Q1 2017, up from 0.27% in Q1 201653.

Figure 3.1.4 illustrates the split by type of broadband subscriptions in the Irish market since Q1 2016, while Figure 3.1.5 shows the net additions to broadband subscriptions by each platform. The net total number of broadband subscriptions has increased this quarter, driven mainly by increases in VDSL subscriptions.

---

53 Additional FTTP subscriptions were included from Q3 2016. Figures presented should not therefore be interpreted as demonstrating year-on-year growth.
Figure 3.1.4 – Broadband Subscriptions by Platform

Figure 3.1.5 – Broadband Subscriptions - Net additions

Figure 3.1.6 provides an estimate of the proportion of business and residential subscriptions to DSL, VDSL, cable, FWA, mobile broadband, fibre and satellite.
broadband services\textsuperscript{54}. In Q1 2017, 82.3\% of broadband subscriptions on all platforms were classed as residential broadband subscriptions. The platform with the highest percentage of residential vis-à-vis business subscriptions is cable broadband, while the mobile broadband category has the highest percentage of business customers.

**Figure 3.1.6 – Broadband Subscriptions by Subscription Type**

Figure 3.1.7 illustrates the breakdown of broadband subscriptions by advertised (headline) speed across all fixed broadband platforms (mobile broadband is excluded). In total, approximately 67.0\% of broadband subscriptions were \( \geq 30\text{Mbps} \) (with 22.4\% \( \geq 100\text{Mbps} \)). This equates to approximately 69.8\% (with 24.9\% \( \geq 100\text{Mbps} \)) of residential subscriptions and 46.3\% (with 3.4 \% \( \geq 100\text{Mbps} \)) of business subscriptions.

The data suggests that most business and residential users subscribe to broadband services with advertised download speeds of between 30Mbps - 100Mbps. This may be due in part to Virgin Media primarily serving the residential market rather than business market as evidenced in Figure 3.1.6 above. Many larger business users access their broadband services over dedicated leased lines. Leased lines are not included in these charts. Leased line speeds can range up to speeds in excess of 1 gigabyte per second.

\textsuperscript{54} ComReg revised the methodology employed to calculate DSL and VDSL (residential and business) subscriptions in Q2 2016. Revisions to historical data have been made.
Figure 3.1.7 – Fixed Broadband Download Speeds and Subscription Type

Figure 3.1.8 shows broadband subscriptions by advertised (headline) speed and the type of broadband platform subscribed to.

Figure 3.1.8 – Fixed Broadband Download Speeds and Platform

Figure 3.1.9 shows the change in fixed broadband subscriptions by advertised (headline) download speeds between Q1 2015 and Q1 2017. Over the entire period, growth in

---

55 *Estimated percentage split.
broadband speeds has been mainly in subscriptions with speeds above 30Mbps. The share of these subscriptions has increased from 58.1% in Q1 2016 to 67.0% in Q1 2017.

**Figure 3.1.9 – Fixed Broadband Subscriptions by Advertised (Headline) Download Speeds**

Figure 3.1.10 provides the market share of fixed broadband operators by number of subscriptions. DSL, VDSL cable modem, FWA, satellite and fibre subscriptions are used to calculate fixed broadband market shares.

Operators with a market share of 2% or more are shown in the chart below. All those operators with less than 2% of total fixed broadband subscriptions are grouped together under the heading ‘OAOs’.

According to the data received from operators for Q1 2017, Eir had 32.3% of total fixed broadband subscriptions, followed by Virgin Media who had 26.6% of subscriptions. Vodafone had 19.3% (excluding mobile broadband subscriptions) and Sky Ireland had an 12.2% market share. All other OAOs combined accounted for the remaining 9.6% share of fixed broadband subscriptions.

---

56 ComReg revised the methodology employed to calculate DSL and VDSL (residential and business) subscriptions in Q2 2016. This also applies to broadband speeds. Revisions to historical data have accordingly been made.
Figure 3.1.10 – Subscription Market Share of Fixed Broadband Market

Figure 3.1.11 shows the market share of mobile broadband operators by subscriptions. As of Q1 2017, Vodafone had the largest share with 44.8%. Three Group’s market share was 40.8%, down from 47.9% in Q1 2016. Eir Group Mobile had a market share of 12.8% up from 11.6% in Q1 2016 while OAOs accounted for the remaining 1.6%.

Figure 3.1.11 – Subscription Market Share of Mobile Broadband Market
3.2 Provision of DSL Access

Figure 3.2.1 examines the provision of DSL access. DSL broadband services are provided to consumers by operators using three alternative methods of access. DSL may be provided directly to the consumer by Eir using direct access to its network; this accounted for 44.1% of all DSL subscriptions in Q1 2017. Eir’s market share of retail DSL lines has declined by 1.8 percentage points over the last year. Retail DSL may also be provided by OAOs who use either Eir’s wholesale bitstream source, which enables OAOs to resell another operator’s DSL service, or by offering DSL-based broadband using local-loop unbundling (LLU).

In Q1 2017, 42.8% of all DSL lines were provided by OAOs using wholesale bitstream. In absolute terms there were 177,391 wholesale bitstream lines, a decrease of 15.9% since Q1 2016. The remaining 13.1% of DSL lines were provided to subscribers by OAOs using local-loop unbundling. In Q1 2016 there were 54,373 unbundled local loops, down from 62,523 in Q1 2016 (-13.0%) and down from 55,938 in Q4 2016 (-2.8%).

Figure 3.2.1 - Provision of DSL Access

Figure 3.2.2 shows the number of unbundled lines according to their shared and full\(^{57}\) unbundling status. Between Q1 2016 and Q1 2017 the total number of LLU lines

---

\(^{57}\) Full LLU and shared LLU are two ways a copper loop may be unbundled. While full LLU assigns the entire copper loop to the leasing operator, shared LLU enables other operators and the incumbent to share the same line. With shared access consumers can acquire voice and data services from an operator or alternatively data services alone while retaining the voice services of the incumbent.
decreased by 13.0% and declined by 2.8% since Q4 2016. Full LLU lines decreased by 13.7% since Q1 2016 and declined by 1.8% since Q4 2016. Similarly shared LLU lines decreased by 12.9% since Q1 2016 and declined by 3.0% since Q4 2016.

**Figure 3.2.2 – Number of Unbundled Local Loops**

VDSL broadband services are provided to consumers by operators using three alternative methods of access. VDSL may be provided directly to the consumer by Eir using direct access to its network; this accounted for 48.9% of all VDSL subscriptions in Q1 2017. Eir’s market share of retail VDSL lines has declined by 5.8 percentage points over the last year. Retail VDSL may also be provided by OAOs who use either wholesale bitstream, which enables OAOs to resell another operator’s VDSL service, or by offering VDSL-based broadband using virtual unbundled local access (VULA).

In Q1 2017, 17.9% of all VDSL lines were provided by OAOs using wholesale bitstream. In absolute terms there were 94,009 wholesale VDSL bitstream lines in Q1 2017, a decrease of 35.5% since Q1 2016. The remaining 33.2% of VDSL lines were provided to subscribers by OAOs using VULA. In Q1 2017 there were 174,569 VULA lines, up from 31,874 in Q1 2016 (+448%) and up from 162,194 in Q3 2016 (+7.6%).
3.4 Usage of Broadband Services

Figure 3.4.1 shows data volumes generated by fixed and mobile broadband subscribers as well as subscribers to mobile voice and data services. Fixed broadband volumes alone reached 495,715 terabytes while mobile data volumes were over 57,723 terabytes\(^{58}\).

**Figure 3.4.1 – Fixed Broadband and Mobile Data Volumes**

<table>

<td>+26.8%</td>
</tr>
</tbody>
</table>

Figure 3.4.2 illustrates average monthly data usage volumes by subscription type. In Q1 2017 an average fixed broadband subscriber used 120.4 GB of data per month. The majority of traffic is generated by residential subscribers with an average monthly data usage per residential subscriber reaching 129.0 GB in Q1 2017. An average business fixed broadband subscriber used 56.0 GB of data per month in Q1 2017. In comparison, average traffic per smartphone reached 3.7 GB of data while the average traffic per dedicated mobile broadband subscriber was 8.7 GB of data.

\(^{58}\) Mobile data volumes refer to traffic generated from mobile broadband plus mobile voice and data services.

\(^{59}\) This figure consists of aggregated data volumes from various subscription types. For Q3 2015 to Q1 2017 data generated via cable broadband is based on estimates.
Figure 3.4.2 – Monthly Traffic per Fixed Broadband Subscription by Type

Figure 3.4.3 provides a breakdown of average monthly data usage volumes by broadband platform. In Q1 2017 the average cable broadband subscriber used 179.6 GB of data per month followed by a VDSL subscriber (126.8 GB), followed by a FTTP subscriber (108.9 GB) and a DSL subscriber (68.5 GB). It can be observed from Figure 3.4.3 that the average volume of data used increases with download speed as cable, VDSL and FTTP broadband platforms have the highest proportion of high speed broadband subscriptions as noted in Figure 3.1.8.

Figure 3.4.3 – Monthly Traffic per Broadband Subscription by Platform
3.5 Broadband Penetration

The total number of broadband subscriptions in Ireland for Q4 2016 was 1,721,718. Using fixed residential broadband subscriptions only, 1,210,933 (i.e. excluding business subscriptions and mobile broadband subscriptions), the estimated fixed broadband household penetration rate (there were 1,720,500 households in Ireland using the Central Statistics Office (CSO) Q1 2017 estimate) as of Q1 2017 was 70.4%.

Based on the total number of broadband subscriptions in Ireland for Q1 2017, the broadband per capita penetration rate (including mobile broadband) was 36.5%. When mobile broadband is excluded, the penetration rate was 29.1%. These figures are based on a population of 4,712,200 from the CSO Q1 2017 estimate.

Figure 3.5.1 shows fixed broadband subscriptions per capita among 25 EU countries in Q4 2014 and Q4 2016. Based on this data, Ireland’s fixed broadband per capita penetration rate (28.6%) is less than the benchmarked EU average of 31.0%.

Figure 3.5.1 – Fixed Broadband Subscriptions per Capita

---

61 It should be noted that ComReg reports dedicated mobile broadband subscriptions (i.e. on the basis of mobile dongles/datacards) only. Subscriptions with Internet access over a handset are not included. Therefore, the total number of mobile broadband users (i.e. dedicated mobile broadband and handset subscriptions with internet access) will be higher than stated in this report. On the other hand, a broadband subscriber may have both a fixed and mobile broadband subscription and therefore, a broadband penetration rate based on both mobile and fixed subscriptions may overestimate the penetration rate.

62 Estimates based on Quarterly National Household Survey (QNHS).

63 Q4 2016 is the latest quarter for which this information is available.
Figure 3.5.2 shows the proportion of households with broadband connections from 2012 to 2016. Both fixed and mobile broadband are included. Ireland’s household broadband penetration rate, at 86%, is higher than the EU28 average of 83%. Penetration has increased by 23 percentage points since 2012 while the EU28 penetration has increased by 11 percentage points. Figure 3.5.3 overleaf presents broadband penetration rates in Ireland and EU since 2007.

**Figure 3.5.2 – Household Broadband Subscriptions, 2012 - 2016**

64 Latest available whole-year data.

65 Households with at least one member aged 16-74. Broadband connection includes: DSL, VDSL, wired fixed (cable, fibre, Ethernet, PLC), fixed wireless (satellite, Wi-Fi, WiMax) and mobile wireless (3G/4G).

66 (online data code [isoc_ci_it_h](http://isoc_ci_it_h)).
3.6 Wi-Fi Broadband Access

While Wi-Fi originally emerged as an alternative to share broadband connectivity in the home and to provide access to nomadic laptop users in airports and other public places, it is now being used by a broader range of service providers with different business models and services which include in home connectivity, outdoor access for nomadic users, and off-loading and coverage alternatives for mobile operators.

ComReg presents data on the Wi-Fi market based on the number of public Wi-Fi hotspots and access points located nationally. Internet hotspots are typically public wireless access points where a computer, usually a laptop, or other portable device such as an iPhone or tablet can connect to the internet. A Wi-Fi hotspot can be made up of one or more Wi-Fi access points. Wi-Fi hotspots tend to be found in airports, hotel lobbies and cafés and restaurants. In most cases, the user pays for high-speed internet access at an access point, based either on a vouchered payment for a specific amount of time online or a recurring monthly subscription. There are a number of providers of these services in Ireland including Sky Ireland, BT Ireland and Bitbuzz.

---

67 Additional Wi-Fi services information is available from one operator since Q3 2015. Hence, information in Figure 3.6.1 is not directly comparable to information in previous periods.

68 Hotspots are typically public locations at which broadband internet access can be obtained. At these hotspots, users with a computer (usually a laptop) can wirelessly connect to the internet either for free or on payment of a fee. Typical locations for such hotspots include cafes and restaurants, hotels and airports. In general terms, more than one access point can be found at a hotspot.

69 Bitbuzz was acquired by Virgin Media.
Comparing Q1 2016 to Q1 2017, the number of Wi-Fi hotspots decreased by 65% and the number of access points decreased by approximately 35.3% \textsuperscript{70}. Wi-Fi minutes decreased by 42.1% over this period.

A breakout of the data by operators’ percentage shares in Q1 2017 is also provided below.

**3.7 Fixed and Mobile Broadband Pricing Data**

ComReg uses independently collated Strategy Analytics (Teligen) pricing data using OECD-approved methodologies to examine the relative prices of a number of specific fixed broadband and mobile broadband usage baskets of national broadband services and broadband services in other selected countries for both residential and business users. The pricing data used for international comparisons includes pricing information for selected countries, namely Germany, Denmark, Spain, Netherlands and the United Kingdom \textsuperscript{71}.

\textsuperscript{70} As of Q3 2016 Eir does not provide this service.

\textsuperscript{71} In future QKDRs ComReg may expand the analysis and include more countries for international price comparisons.
For national comparisons, the prices advertised\textsuperscript{72} by the largest operators (in terms of number of subscribers to fixed broadband services and separately number of subscribers to mobile broadband services) during Q1 2017 were analysed\textsuperscript{73} for selected OECD usage baskets. In this QKDR, standalone and bundled fixed broadband service prices advertised by Eir, Virgin Media, Vodafone, Sky, Digiweb and Imagine were analysed. For mobile broadband services, prices advertised by the Three Group, Vodafone, Meteor, Eir Mobile, Tesco and iD were analysed. Thus, the broadband pricing analysis does not necessarily present the lowest prices available in the entire market, but rather the lowest prices offered by the operators having the largest number of subscribers. It should also be noted that some of the operators included in the analysis do not offer their services nationally\textsuperscript{74}. In addition, some operators only offer broadband services bundled with another service (e.g. fixed voice services which can include line rental, sometimes also with an inclusive amount of call minutes). In these instances, the analysis is based on the cost of the bundle excluding any voice related usage patterns. i.e., only broadband usage related factors are taken into account\textsuperscript{75} in the analysis.

For international comparisons, prices advertised\textsuperscript{76} by the largest operators (in terms of the number of subscribers to fixed broadband services and separately number of subscribers to mobile broadband services) operators in each of the respective countries during Q1 2017 were analysed\textsuperscript{77} for selected usage baskets\textsuperscript{78} (with an average per country price presented based on the average of lowest price tariffs advertised by three highest ranking operators in national pricing comparisons). In order to enable international comparisons, prices are presented in Euro Purchasing Power Parities (PPPs) and exclude VAT charges. PPPs provide an indication of the cost of telecoms services in countries analysed in relation to the cost of all other products and services.

The presented analysis accounts for the fact that broadband services differ in terms of advertised download/upload speeds to ensure that a meaningful comparison can be

\textsuperscript{72} The pricing analysis is based on a review of operators' advertised prices in the period Q1 2017.

\textsuperscript{73} The subscribers of these operators jointly account for over 94\% of all fixed broadband subscribers and 100\% of all mobile broadband subscribers. For fixed broadband, tariffs based on broadband services provided over DSL, Fibre (incl. VDSL), Cable and FWA were analysed. For mobile broadband, tariffs on broadband services provided over 3G and 4G networks were analysed.

\textsuperscript{74} For example, Virgin Media offers fixed broadband services only in the areas where its cable network has been rolled out.

\textsuperscript{75} In other words, the broadband pricing analysis does not take account of fixed voice call usage.

\textsuperscript{76} The pricing analysis is based on a review of operators' advertised prices in the period Q1 2017.

\textsuperscript{77} The subscribers of these operators jointly account for over 80\% of all fixed broadband subscribers and 80\% of all mobile broadband subscribers in each of the respective countries.

\textsuperscript{78} The same basket was applied to each respective country in order to make the international comparison.
made between packages in terms of contracted download speeds offered. Packages which limit usage through speed restrictions when usage exceeds inclusive allowances are excluded. The presented analysis also incorporates discounts offered by operators. Nonrecurring charges (e.g. charges for the installation of a service) are discounted/amortised over three years and other recurring fixed costs such as line rental (in case of fixed broadband) are included and any other additional broadband related charges are included in the baskets.

The OECD basket methodologies are reviewed and revised periodically, with the latest revision made in early 2010 \(^{79}\) for fixed broadband baskets and 2012 \(^{80}\) for mobile broadband baskets. Further information on the composition of the broadband basket can be found in the Explanatory Memorandum which accompanies this report.

The following baskets are presented in this report\(^ {81}\):

**OECD Residential and business fixed and mobile broadband baskets**

<table>
<thead>
<tr>
<th>Type of basket</th>
<th>Basket</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fixed Broadband Residential</td>
<td>18GB basket (broadband speeds &lt;= 30 Mbps)</td>
</tr>
<tr>
<td>Fixed Broadband Residential</td>
<td>54GB basket (broadband speeds &gt;30 Mbps)</td>
</tr>
<tr>
<td>Fixed Broadband Business</td>
<td>33GB basket</td>
</tr>
<tr>
<td>Mobile Broadband Residential</td>
<td>5GB basket</td>
</tr>
<tr>
<td>Mobile Broadband Business</td>
<td>10GB basket</td>
</tr>
</tbody>
</table>

These baskets were selected given their closeness to the national broadband usage patterns observed having regard to the data provided by fixed and mobile broadband operators to ComReg for the purpose of the Quarterly Key Data Report (see Figures 3.4.2 and 3.4.3 above for fixed and mobile broadband data usage patterns). ComReg notes that these baskets reflect usage patterns of an average user and do not necessarily reflect prices of tariffs that are geared towards customers having different usage profiles.

---

\(^{80}\) See [http://dx.doi.org/10.1787/5k92wd5kw0nw-en](http://dx.doi.org/10.1787/5k92wd5kw0nw-en).

\(^{81}\) In future QKDRs ComReg may expand the analysis and present price comparisons based on additional and/or different usage baskets.
ComReg notes that comparisons are based on the prices of advertised tariffs only and the analysis does not take into consideration other important factors such as quality of the network, levels of customer care, additional units of consumption available after having accounted in the analysis for the units in the OECD usage basket, minimum contract term etc.

**OECD Residential Fixed Broadband Service Basket**

Figure 3.7.1 compares the cheapest residential tariffs advertised by fixed broadband providers (whether standalone broadband or broadband sold as part of a bundle) for residential customers based on an OECD 18GB and 54GB monthly data usage baskets.

For fixed broadband where the advertised download speed of the broadband service does not exceed 30Mbps, Digiweb offers the cheapest tariff for this particular usage profile at €29.95 followed by Eir (€45.00). For fixed broadband where the advertised download speed of broadband service exceeds 30Mbps, Vodafone offers the cheapest tariff (€40.00), followed by Digiweb (€44.34) and Virgin Media (€49.44).

**Figure 3.7.1 - Residential Fixed Broadband Basket (National)**

---

82 Tariffs publically advertised during Q1 2017.

83 This tariff is based on Digiweb’s fixed wireless access (FWA) broadband service.
Figure 3.7.2 illustrates Ireland’s ranking alongside five other Western European countries. Ireland ranks in fifth place with an average price of €37.54\textsuperscript{84} for this particular residential basket. The average price in Ireland is 14.1\% more expensive than the average price\textsuperscript{85} for all of the countries included in the analysis.

**Figure 3.7.2 - Residential Fixed Broadband Basket (International)\textsuperscript{86}**

![OEC Residential Fixed Broadband 54GB Basket, (> 30Mbps)](image)

**OECD Business Fixed Broadband Service Basket**

Figure 3.7.3 compares business tariffs advertised by fixed broadband service providers (whether standalone broadband or broadband sold as part of a bundle) for business customers based on a 33GB monthly data usage basket. Presented prices exclude VAT charges. Digiweb offers the cheapest tariff (€30.36) followed by Eir (€35.48) and Vodafone (€40.00).

\textsuperscript{84} As noted previously, average prices used for international comparisons exclude VAT charges.

\textsuperscript{85} The average of prices presented in Figure 3.7.2.

\textsuperscript{86} From Q1 2017 figure 3.7.2 has been replaced from the previous criteria of 18GB (>30Mbps) with that of 54GB (>30Mbps). This is to reflect the market offering greater data allowance for fixed broadband.
Figure 3.7.4 shows that in an international comparison context Ireland (€35.28\textsuperscript{87}) ranks in fourth place. The average price in Ireland is 0.2\% cheaper than the average price\textsuperscript{88} for all of the countries included in the analysis.

\textsuperscript{87} As noted previously, average prices used for international comparisons exclude VAT charges.

\textsuperscript{88} The average of prices presented in Figure 3.7.4.
OECD Residential Mobile Broadband Service Basket

Figure 3.7.5 compares pre-paid and post-paid tariffs advertised by mobile broadband service providers for residential customers based on an OECD 5GB monthly mobile data usage basket. Meteor offers the cheapest tariff (€14.99) followed by Eir Mobile (€15.00), iD (€16.92) and Vodafone (€21.11).

Figure 3.7.5 - Residential Mobile Broadband Basket (National)

Figure 3.7.6 below illustrates Ireland’s ranking alongside five other Western European countries. Ireland ranks in second place with an average price of €12.71 for this particular basket. The average price in Ireland is 35.2% cheaper than the average price for all of the countries included in the analysis.

---

89 As noted previously, average prices used for international comparisons exclude VAT charges.

90 The average of prices presented in Figure 3.7.6.
**OECD Business Mobile Broadband Service Basket**

Figure 3.7.7 compares post-paid tariffs advertised by mobile broadband service providers\(^91\) for business customers based on an OECD 10GB monthly data usage basket. Presented prices exclude VAT charges. Eir Mobile (€16.52) offers the cheapest tariff followed by Vodafone (€18.00) and Three (€21.99).

---

91 Only tariffs advertised by Vodafone, Three and Eir Mobile were analysed for business customers. Some operators do not offer mobile broadband service to business customers.
Figure 3.7.8 shows that, from an international comparison perspective, Ireland (€18.84\textsuperscript{92}) ranks in first place. The average price in Ireland is 37.1\% cheaper than the average price\textsuperscript{93} for all of the countries included in the analysis.

\textbf{Figure 3.7.8 - Business Mobile Broadband Basket (International)}

\centering
\includegraphics[width=\textwidth]{figure3.7.8.png}
\caption{OECD Laptop Business Mobile Broadband 10GB Basket (All tariffs and speeds)}
\end{figure}

\textsuperscript{92} As noted previously, average prices used for international comparisons exclude VAT charges.

\textsuperscript{93} The average of prices presented in Figure 3.7.8.
4. Mobile Market Data

4.1 Number of Subscriptions and Penetration Rate

At the end of March 2017 there were 5,953,122 mobile subscriptions in Ireland, including mobile broadband and Machine to Machine (‘M2M’) subscriptions. If mobile broadband subscriptions (348,820) and M2M subscriptions (707,598) are excluded, the total number of mobile subscriptions in Ireland was 4,896,70494.

Figure 4.1.1 – Mobile Subscriptions

In Q1 2017 there were 4,278,646 mobile voice and data subscribers using 3G/4G networks in Ireland. This figure can be taken as an indication of the number of smartphone users accessing advanced data services such as web/internet content, online multiplayer gaming content, Video on Demand (VoD) or other equivalent advanced data services (excluding SMS and MMS). This represents approximately 87.4% of all mobile subscriptions (excluding dedicated mobile broadband and M2M) in Q1 2017.

Figure 4.1.2 below shows the breakdown of total active subscribers, total standard mobile voice and data subscribers using 3G/4G networks and dedicated mobile broadband subscribers from Q1 2016 to Q1 2017.

94 Mobile broadband subscriptions and mobile subscriptions (exc. Mobile broadband and M2M) were revised for Q3 2016 and Q4 2016. See note 6 within the corrigendum.

</tbody>
</table>

Figure 4.1.3 charts mobile penetration since Q1 2016 and shows that at the end of March 2017, mobile penetration, based on a population of 4,712,200 (using the CSO Q1 2017 estimate), was 126.3% including mobile broadband and M2M and 103.9% excluding mobile broadband and M2M. Mobile penetration is recognised as the standard metric internationally to measure the adoption of mobile services, and is calculated based on the number of active SIM cards per 100 of the population.

Given that some mobile users may have used more than one active SIM card during the period, there is likely to be some over-estimation of actual individual mobile penetration using this metric. ComReg’s calculation of mobile subscriptions includes active SIMs bundled with mobile broadband data cards and USB modems for internet access via laptops/PCs, SIMs that enable the flow of data between Machines as well as SIM cards used in mobile phones for voice and data services.
4.2 The Profile of Mobile Subscriptions in Ireland

Mobile users pay for their mobile service by either purchasing pre-paid credit, or by receiving a monthly bill from their mobile operator, described in this report as a post-paid payment option.

Figures 4.2.1 and 4.2.2 illustrate the mobile subscription base (including and excluding mobile broadband and M2M subscriptions) in Ireland classified by the proportion of pre-paid and post-paid subscriptions on 2G, 3G and 4G networks at the end of Q1 2017. Post-paid subscriptions are increasing, accounting for 53.8% of subscriptions in Q1 2017, up from 50.9% one year previously at the expense of a decline in pre-paid subscriptions. If mobile broadband and M2M subscriptions are excluded, post-paid subscriptions account for 45.0% of subscriptions, up from 42.8% in Q1 2016.
Figure 4.2.1 – Profile of Pre-Paid and Post-Paid Subscriptions

![Graph showing the profile of pre-paid and post-paid subscriptions across mobile operators in Q1 2017.]

Figure 4.2.2 – Mobile Subscriptions by Pre-pay/Post-pay

![Bar chart showing mobile subscriptions by pre-pay/post-pay split from Q1 2016 to Q1 2017.]

Figure 4.2.3 shows the pre-paid and post-paid subscription profile for each of the mobile operators in the Irish market. Mobile broadband and M2M subscriptions are included. As of Q1 2017, the mobile operator with the highest proportion of post-paid subscriptions was Vodafone (60.2%), followed by Three Group (58.1%), Eir Group Mobile (48.3%) and Tesco Mobile (15.3%). Post-paid subscriptions for OAOs was 30.3%. 

ComReg 17/50
Figure 4.2.3 – Profile of Pre-Paid and Post-Paid Subscriptions by Operator

Figure 4.2.4 shows the split between pre-paid and post-paid mobile broadband subscriptions between Q1 2016 and Q1 2017. 84.9% of all mobile broadband subscriptions were post-paid at the end of March 2017, up from 80.4% one year previously.

Figure 4.2.4 – Profile of Pre and Post Paid Mobile Broadband Subscriptions
Figure 4.2.5 shows the split of post-paid business and non-business mobile subscriptions including and excluding mobile broadband (MBB) and M2M between Q1 2016 to Q1 2017. Approximately 49.4% of post-paid mobile subscriptions (including mobile broadband and M2M) and 33.3% of post-paid mobile subscriptions (excluding mobile broadband and M2M) were classed as business subscriptions in Q1 2017.

**Figure 4.2.5 – Post-Paid Business and Residential Mobile Subscriptions**

Figure 4.2.6 shows the split of mobile subscribers (including mobile broadband and M2M subscribers) broken down by mobile network technology used by these subscribers. For example, subscribers who purchase 4G plans and have generated traffic on a 4G network are categorised as 4G subscribers. Categories are mutually exclusive in that subscribers who have generated traffic on multiple networks (e.g. 2G and 3G) are categorised as users of the higher quality network (3G in this example). By the end of March 2017, 42.9% of mobile subscribers were categorised as 4G network users, 42.8% were using 3G networks with the remaining 14.3% of subscribers using 2G networks only.

---

95 Figure 4.2.5 has been altered in Q1 2017 with the earliest data starting from the left rather than right.

96 All M2M subscriptions are assumed to be business subscriptions.
Figure 4.3.1 illustrates the change in voice minutes, SMS, and MMS (Multimedia Messaging Service) messages and ‘other data’ volumes (internet uploads and downloads) sent between Q1 2014 and Q1 2017. Total retail mobile voice traffic was 3.084 billion minutes in Q1 2017, the same as Q1 2016.

The total number of SMS messages sent by mobile users in Ireland was over 1.26 billion in Q1 2017, down 15.5% on Q1 2016 and down by 6.7% since Q4 2016. The number of multimedia messages (MMS) sent was down by 7.5% in the year to Q1 2017. Data usage volumes continue to rise, increasing by 62.5% in the year to Q1 2017 to reach 57,523 terabytes.

---

97 Other data volumes means mobile traffic for which customers do and do not have to pay per MB charges and refers to both uploads and downloads. Retail international roaming data downloaded from network subscribers roaming on foreign networks (including EU-28) is also included.
Figure 4.3.2 illustrates the share of types of mobile voice call minutes. As of Q1 2017, 77.5% of all mobile voice minutes were classified as mobile-to-mobile (on-net and off-net), 11.7% of mobile voice minutes were to fixed line phones, 8.1% were classified as international and roaming minutes and the remaining 2.8% were advanced voice minutes which include calls to premium rate services.

Figure 4.3.2 – Voice Call Minute Volumes by Type
Figure 4.3.3 shows the change in the on-net and off-net mobile to mobile voice call minutes since Q1 2016. During Q1 2017, 56.4% of all mobile to mobile voice minutes were classified as on-net, down from 58.3% in Q1 2016.

**Figure 4.3.3 – Mobile to Mobile Voice Call Minute Volumes by Type**

![Mobile to Mobile Voice Call Minutes, Q1 2016 - Q1 2017](image)

Figure 4.3.4 shows the change in the monthly mobile voice call minutes per subscription. In Q1 2017 the average usage was 209.9 minutes (down by 0.7% since Q1 2016).

**Figure 4.3.4 – Monthly Mobile Voice Call Minutes per Subscription by Type**

![Monthly Mobile Voice Call Minutes, Q1 2015 - Q1 2017](image)
Figure 4.3.5 shows the change in the monthly mobile data volumes per subscription. In Q1 2017 the average monthly number of SMS/MMS sent was 87 and the average traffic per smartphone\(^98\) reached 3.7 GB of data, while the average traffic per dedicated mobile broadband subscriber was 8.7 GB of data\(^99\).

**Figure 4.3.5 – Monthly Mobile Messaging and Data Volumes per Subscription**

![Graph showing monthly SMS/MMS and data volumes per subscription, Q1 2015 to Q1 2017.]

Figure 4.3.6 provides the breakdown of mobile data volumes by mobile network technology. Of all mobile data from Q1 2017 44,897 terabytes or 78.1% was generated on 4G networks, up from 57.7% in Q1 2016.

---

\(^98\) Based on the number of standard mobile voice and data subscribers using 3G and 4G networks.

\(^99\) Data traffic refers to both uploads and downloads.
4.4 Mobile Revenues

Figure 4.4.1 shows that mobile retail revenues for Q1 2017 were over €377 million. Messaging revenues decreased by 10.6% this quarter, data revenues decreased by 3.2% while voice and other revenues decreased by 6.8% since Q4 2016.

Figure 4.4.1 – Total Mobile Retail Revenues
Wholesale mobile revenues were over €46 million in Q1 2017 (a decrease of 5.6% since Q4 2016), the vast majority accounted for by terminating traffic, followed by roaming\(^\text{100}\) and access\(^\text{101}\) revenues.

### 4.5 Average Monthly Revenue per User

Mobile ARPU is a function of both the price of mobile services and the level of usage of mobile services. In Q1 2017 mobile APRU (blended) was €22.11 per month, down from €23.01 per month in the previous quarter and down from €24.12 per month in the period Q1 2016.

This overall decline over this period is in line with a general downward trend in ARPU across Western European countries. Based on data from Analysys Mason’s Telecom Matrix monthly mobile ARPU across the average of 14 Western European countries fell by 3.9% in Q4 2016\(^\text{102}\) compared to Q4 2015.

Figure 4.5.1 illustrates the change in ARPU for prepaid and post-paid subscribers. In Q1 2017 mobile ARPU for prepaid subscribers was €13.46 per month while mobile ARPU for post paid subscribers was €29.72 per month.

The general decline in ARPU is likely to be a reflection of a number of factors such as those attributable to increased sales of bundled products (combining mobile with fixed calls and sometimes broadband and/or TV) and, more recently, reductions in roaming and mobile termination rates, among others.

---

\(^{100}\) Revenues from the provision of wholesale roaming (inbound) services (voice/text/data services). Excludes revenues from the provision of wholesale roaming (outbound) services to hosted MVNOs.

\(^{101}\) Includes revenues from the wholesale provision of voice, messaging and data services to MVNOs and access revenues not related to traffic. Includes revenues from the provision of wholesale roaming (outbound) services (voice/text/data services) to hosted MVNOs. Includes revenues from wholesale provision of voice, messaging and data services based on national roaming agreements.

\(^{102}\) Q4 2016 is the latest quarter for which this information is available.
4.6 Machine to Machine Subscriptions

Machine to Machine (M2M) refers to technologies that involve data communication between devices or systems in which, at least in principle, human intervention does not occur. These technologies may encompass either wireless or wired communications, or both. M2M communication is already widely deployed in Ireland and its usage is set to grow rapidly, driven in no small part by the expansion of next generation telecommunications technology and a decline in the cost of the embedded wireless modules and sensors that enable M2M services. This continued improvement in the infrastructural environment around M2M has led to a rapid growth of applications and services that meet users’ business and lifestyle needs. M2M technologies transfer data on the condition of physical assets and devices to a central location (which is distantly located the devices) for effective monitoring and control. M2M has a multitude of uses, with current deployments in the healthcare, energy, home automation and transportation sectors. Specific examples of M2M applications include smart metering, vehicle and consignment tracking and alarm monitoring systems of various kinds, ATM machines signalling the need for cash replacement, smart grid monitoring of real time electricity demand, smart home applications such as switching on and off lights, heating and other appliances.

Different networking technologies can be used to connect M2M devices, depending on the amount of mobility needed, quality required, data rate, the degree of dispersion of
devices over an area, and so on. Gathering data on dedicated M2M mobile connections assists ComReg in assessing future regulatory needs for M2M, e.g. for numbering resources. The additional data also allows for more accurate assessment of mobile telephony and broadband connections.

There were 707,598 M2M subscriptions at the end of March 2017. This is an increase of 23.0% since Q1 2016. Figure 4.6.1 outlines market shares based on active M2M subscriptions as well as market shares in terms of business subscribers (including mobile broadband and M2M subscriptions).

In Q1 2017 Three Group had the largest market share of M2M subscriptions at 48.4% followed by Vodafone with 47.6% of market share. Eir Group Mobile had the remaining 4.0% of M2M subscriptions.

Vodafone had the largest market share in terms of business subscriptions\textsuperscript{103} (52.2%) followed by Three Group (38.2%) and Eir Group Mobile (9.4%). OAOs accounted for the remaining 0.2%.

Figure 4.6.1 – Market Share – Business and M2M Subscriptions

\textsuperscript{103} Business subscriptions excluding M2M and business mobile broadband subscriptions.
4.7 Competition in the Mobile Market

Figures 4.7.1 and 4.7.2 outline mobile market shares based on the number of active subscriptions reported by each operator.

Figure 4.7.1 includes mobile broadband and M2M while figure 4.7.2 excludes mobile broadband and M2M. Vodafone has the highest market share including and excluding mobile broadband and M2M (38.6% and 36.8%), followed by Three Group (34.9% and 32.5%), Eir Group Mobile (17.9% and 20.3%) and Tesco Mobile (6.1% and 7.3%). OAOs have market shares of 2.6% and 3.1% respectively.

Figure 4.7.1 – Market Share – Number of Subscriptions (inc. mobile broadband and M2M)\(^{104}\)

\(^{104}\) As of Q2 2014 O2 is included under Three Group umbrella. For more details see note on page 9 of this report.
Figure 4.7.2 – Market Share – Number of Subscriptions (ex. mobile broadband and M2M)

Vodafone’s market share remains highest at 42.2% followed by Three Group at 33.5%. Eir Group Mobile’s market share is the next largest at 18.4% followed by Tesco and OAOs at 4.0% and 1.9% respectively.

Figure 4.7.3 – Market Share by Revenue Q1 2015 - Q1 2017
4.8 Switching in the Mobile Market

Figure 4.8.1 illustrates the number of subscribers who port their numbers as a proportion of total gross additions\textsuperscript{105}. There were 460,910 gross additional subscriptions in Q1 2017. In the quarter to March 2017, 91,128 numbers were ported between mobile operators with a total of 366,853 numbers having been ported over a twelve month period. Gross additions via ported numbers accounted for 19.8% of total gross additions in Q1 2017.

![Figure 4.8.1 – Gross Subscription Additions and Numbers Ported](image)

4.9 Mobile Pricing Data

ComReg uses independently collated Strategy Analytics (Teligen) pricing data using OECD-approved methodologies to examine the relative prices of a number of specific mobile phone usage baskets of national and international telecoms services for both residential and business users. The pricing data used for international comparisons includes pricing information for selected countries, namely Germany, Denmark, Spain, Netherlands and the United Kingdom\textsuperscript{106}.

\textsuperscript{105} Gross additions include consumers who decide to avail of multiple SIMs and thus, slightly overstate the switching intensity in Ireland.

\textsuperscript{106} In future QKDRs ComReg may expand the analysis and include more countries for international price comparisons.
For national comparisons, the prices advertised\(^{107}\) by the largest operators (in terms of the number of subscribers to mobile voice services) during Q1 2017 were analysed\(^{108}\) for selected usage baskets. In this QKDR prices advertised by Three, Vodafone, Meteor, Eir Mobile, Tesco, Lycamobile, iD, Virgin Media and 48 were analysed. Thus, the analysis does not necessarily present the cheapest tariffs available in the whole market, but rather the lowest cost tariffs offered by the largest operators.

For international comparisons, the prices advertised\(^{109}\) by largest operators (in terms of the number of subscribers to mobile voice services) in each of the respective countries during Q1 2017 were analysed\(^{110}\) for selected OECD mobile phone usage baskets\(^{111}\) (with an average per country price presented based on the average of lowest price tariffs advertised by three highest ranking operators in national pricing comparisons). In order to enable international comparisons, prices are presented in Euro Purchasing Power Parities (PPPs) and exclude VAT charges. PPPs provide an indication of the cost of telecoms services in countries analysed in relation to the cost of all other products and services.

The presented analysis incorporates discounts offered by operators. Nonrecurring charges (e.g. charges for the activation of a service) are discounted/amortised over three years. Calls to mobile (on-net and off-net) and fixed phones are included in the baskets.

The OECD basket methodologies are reviewed and revised periodically, with the latest revision made in 2012\(^{112}\). Further information on the composition of the broadband basket can be found in the Explanatory Memorandum which accompanies this report.

The following baskets are presented in this report\(^{113}\):

---

\(^{107}\) The pricing analysis is based on a review of operators’ advertised prices in the period Q1 2017.

\(^{108}\) The subscribers of these operators jointly account for over 99% of all mobile voice subscribers. 4G tariffs were included in the analysis.

\(^{109}\) The pricing analysis is based on a review of operators’ advertised prices in the period Q1 2017.

\(^{110}\) The subscribers of these operators jointly account for over 80% of all mobile voice subscribers in each of the respective countries.

\(^{111}\) The same basket was applied to each respective country in order to make the international comparison.

\(^{112}\) See [http://dx.doi.org/10.1787/5k92w5kw0nw-en](http://dx.doi.org/10.1787/5k92w5kw0nw-en).

\(^{113}\) In the future QKDRs ComReg may expand the analysis and present price comparisons based on additional and/or different usage baskets.
### Residential and business mobile phone usage baskets

<table>
<thead>
<tr>
<th>Type of basket</th>
<th>Basket</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prepaid Residential</td>
<td>30 calls (50 minutes), 100 SMS, 0.1GB data basket</td>
</tr>
<tr>
<td>Postpaid Residential</td>
<td>100 calls (182 minutes), 140 SMS and 2GB data basket</td>
</tr>
<tr>
<td>Business</td>
<td>300 calls (569 minutes), 225 SMS and 1GB data basket</td>
</tr>
</tbody>
</table>

These baskets were selected given they most closely related to the mobile voice usage patterns presented in figures 4.3.4 and 4.3.5 above. ComReg notes that these baskets reflect usage patterns of an average user and do not necessarily reflect prices of tariffs that are geared towards customers having different usage profiles.

ComReg notes that comparisons are based on the prices of advertised tariffs only and the analysis does not take into consideration other important factors such as quality of the network, levels of customer care, additional units of consumption available after having accounted in the analysis for the units in the OECD usage basket, minimum contract term etc.

**OECD Pre-Paid Residential Mobile Basket**

Figure 4.9.1 compares pre-paid tariffs advertised by mobile phone services providers for residential customers based on a basket of 30 calls (50 minutes), 100 SMS and 100 MB data usage. Lycamobile (€9.00) offers the cheapest tariff for this particular OECD basket, followed by 48 (€10.00) and iD (€15.00).

---

114 ComReg notes that for pre-paid tariffs requiring periodic mandatory top ups (e.g. mandatory monthly (30 day) top ups), the full cost of the top up would be taken into consideration when estimating the total cost of these tariffs.
Figure 4.9.2 illustrates Ireland’s ranking alongside five other Western European countries. Ireland ranks in second place with an average price of €9.21\textsuperscript{116} for this particular basket. The average price in Ireland is 35.8% cheaper than the average price\textsuperscript{117} for all of the countries included in the analysis.

\textsuperscript{115} Fixed element of the price refers to the pre-paid tariffs that require mandatory top-ups.

\textsuperscript{116} As noted previously, average prices used for international comparisons exclude VAT charges.

\textsuperscript{117} The average of prices presented in Figure 4.9.2.
OECD Post-Paid Residential Mobile Basket

Figure 4.9.3 compares post-paid tariffs advertised by mobile phone service providers for residential customers based on a basket of 100 calls (182 minutes), 140 SMS and 2GB data usage. Meteor offers the cheapest tariffs for this particular basket at €19.17 followed by iD (€20.00) and Tesco (€25.00).

Figure 4.9.3 – Residential Post-paid Mobile Phone Services Basket (National)
Figure 4.9.4 shows that Ireland (€17.62 118), in an international comparison context, ranks in third place. The average price in Ireland is 18.6% cheaper than the average price 119 for all of the countries included in the analysis.

**Figure 4.9.4 – Residential Post-paid Mobile Phone Services Basket (International)**

OECD Post-Paid Business Mobile Basket

Figure 4.9.5 compares post-paid tariffs advertised by mobile phone service providers 120 for business customers based on an OECD basket of 300 calls (569 minutes), 225 SMS and 1 GB data usage. Presented prices exclude VAT charges. Eir Mobile offers the cheapest tariff for this particular basket at €20.00, followed by Three (€25.00) and Vodafone (€40.00).

---

118 As noted previously, average prices used for international comparisons exclude VAT charges.

119 The average of prices presented in Figure 4.9.4.

120 Only tariffs advertised by Vodafone and Three were analysed for business customers. Some operators do not offer services to business customers.
Figure 4.9.5 – Business Post-paid Mobile Phone Services Basket (National)

Figure 4.9.6 illustrates Ireland’s ranking alongside five other Western European countries. Ireland ranks in third place with an average price of €28.33\(^{121}\) for this particular basket. The average price in Ireland is 9.1% more expensive than the average price\(^{122}\) for all of the countries included in the analysis.

Figure 4.9.6 – Business Post-paid Mobile Phone Services Basket (International)

---

\(^{121}\) As noted previously, average prices used for international comparisons exclude VAT charges.

\(^{122}\) The average of prices presented in Figure 4.9.6.
### 5. Broadcasting

#### 5.1 Overall Broadcasting Market

This broadcasting data is from the Nielsen TV Audience Measurement (TAM) Establishment Survey.¹²³ The Survey indicated that there were 1,578,000 TV homes in Ireland in January 2017.¹²⁴ Figure 5.1.1 shows the estimated number of TV homes by reception type in January 2017 and July 2016 on the basis of the reception method through which the highest number of TV channels is received. Irish terrestrial DTT only homes represented 12.1% of all TV homes (although 42% of TV homes receive Irish DTT) as of January 2017. Cable/satellite platforms represented the remaining 87.9% of all TV homes in Ireland.¹²⁵

**Figure 5.1.1 – TV Homes by Reception Type¹²⁶**

<td>+0.6%</td>
</tr>
</tbody>
</table>

RECEPTION: Reception type categories are hierarchically defined and mutually exclusive. A home is classified once within reception type and this is based upon the highest form of reception available within the home.

Multi Total: Made up of UK DTT / FTA Satellite, Cable, and SKY homes.

Irish Terrestrial refers to homes which only receive any or all of the following: RTÉ One, RTÉ Two, UTV Ireland, TV3, TG4, 3e, RTÉ One+1, RTÉ News Now, RTÉ jr via an aerial and a set-top box or an aerial and an integrated digital TV or via Saorsat.

Cable/Satellite: Includes UK DTT / FTA Satellite, Cable, IPTV and SKY homes. Sky homes based on the possession of SKY boxes, not on being SKY subscribers.

¹²³ The Establishment Survey is a survey produced by Nielsen TV Audience Measurement (fieldwork is carried out by Behaviours and Attitudes) on behalf of Television Audience Measurement Ireland Ltd (a TV ratings body). The Establishment Survey covers areas such as ownership of TV related equipment, method of TV reception and demographics of TV household individuals such as age etc.

¹²⁴ From Q2 2016 TAM data is based on biannual surveys (January and July) rather than three times a year. Therefore Q2 and Q3 will contain the same data as will Q4 and Q1 of the following year.

¹²⁵ Approximately 362,000 of those reported above as digital cable/sat and total cable/sat are UK DTT/FTA satellite. MMDS (Multichannel Multipoint Distribution Service), was discontinued in April 2016.

¹²⁶ Source: Nielsen TV Audience Measurement Establishment Survey on behalf of TAM Ireland.
Figure 5.1.2 shows TV homes by reception method\textsuperscript{127} from January 2014 to January 2017. The percentage of cable/satellite TV homes (this does not include other satellite i.e. respondents who said ‘don’t know’ and satellites that receive foreign language stations including freesat) has declined from 71% to 63% over the last three years.\textsuperscript{128} Television homes that subscribe to other satellite services beside Sky represented 19% of TV homes in January 2017. Reception by IPTV method is relatively low (3% of TV homes). Approximately 42% of TV homes have Irish DTT.

\textbf{Figure 5.1.2 – TV Homes by Reception Method}\textsuperscript{129}

\begin{figure}[h]
\centering
\includegraphics[width=\textwidth]{tv_homes_reception_method.png}
\caption{TV Homes by Reception Method, January 2014 - January 2017}
\end{figure}

\textsuperscript{127} This is determined by the method by which homes with a TV receive their channels. Each home can have more than one method of reception e.g. aerial and cable or digital satellite, digital satellite and cable, etc. The question is asked for their main and up to 9 TV sets. For this reason, the total for the reception methods adds up to more than 100%.

\textsuperscript{128} It should be noted that from September 2011 the reporting of the cable/satellite figure has changed. This is because up to September 2011 cable/satellite reception method included homes that had both cable and satellite twice (i.e. (1) cable, (1) satellite). Nielsen now publish homes with cable and satellite as one reception method - as cable or satellite (i.e. cable or satellite (1)).

\textsuperscript{129} As of November 2012 ‘Aerial’ includes Saorsat homes. Irish DTT includes Saorsat. Cable/satellite includes MMDS and IPTV, excludes UK DTT, Irish DTT and Saorsat.
Figure 5.1.3 shows that, the total number of TV homes in January 2017 has increased by 0.6% since January 2016. Digital TV homes represent 98.9% of all TV homes compared to 75.5% in January 2012.

Figure 5.1.3 – TV Homes 2012 –2017

Source: Nielsen TV Audience Measurement Establishment Survey on Behalf of TAM Ireland Ltd.
Figure 5.1.4 shows TV homes by broadband\(^{130}\) access, game console and PVR\(^{131}\) ownership between January 2014 and January 2017. Broadband access was present in circa 79% of homes with a television in January 2017. The number of homes with games consoles has increased over the last three years from 31% to 33%. PVR ownership was 60% in January 2017; up from 54% in January 2014.

**Figure 5.1.4 – Broadband, Games Console and PVR Trends**

![Figure 5.1.4 – Broadband, Games Console and PVR Trends](image)

source: Nielsen TV Audience Measurement Establishment Survey on behalf of TAM Ireland Ltd.

---

130 Both fixed and mobile broadband.

131 A PVR is an electronic device used to record media digitally. The PVR is also known as a digital video recorder or DVR. A PVR records and plays back television programmes, but, unlike the VCR, it stores the programs in digital rather than analogue format, for example, SKY+Box, or Virgin Media Digital Video Recorder.
Figure 5.1.5 shows the level of household penetration of pay TV services and free to air TV services in Ireland based on reception method. This chart has been derived by ComReg using Nielsen data and is not a classification used by Nielsen or a classification used as part of the survey itself. Homes with a pay TV (cable, satellite and IPTV homes) service were generally stable from January 2013 to July 2016 at 71% average of all TV homes. However, we have seen a decrease in the latter half of 2016 with the figure at 66% in January 2017.

Figure 5.1.5 – Pay TV vs Free to Air TV Homes, 2012 - 2017

![Pay TV and Free to Air TV Homes January 2012 - January 2017](image)

Source: Nielsen TV Audience Measurement Establishment Survey on Behalf of TAM Ireland Ltd.

132 IPTV is included from September 2011.
6. Appendix

Sky Ireland’s distribution of subscriptions by type (single play, double play or triple play) is estimated using percentage distribution of Sky Ireland’s subscriptions obtained from the market survey data conducted by Behaviour & Attitudes Ltd. The fieldwork on ComReg’s behalf was carried out between 16th – 30th March, 2017. 1,000 respondents were asked the following question:

- Does the service provider, Sky, provide any of the following services in your home?
  - TV
  - Broadband
  - Home Landline service

Respondents who stated that Sky provides more than one service (170 respondents) were then asked the following question:

- You mentioned that Sky provides your (previous answer). Do you receive one bill for these services (if 2 services mentioned) receive one bill for at least two of this services (if 3 services mentioned)?

The respondents who gave a positive answer to the second question (138 respondents) are categorized as bundle subscribers.

Table A1: Sky Ireland’s Distribution of Subscriptions Type

<table>
<thead>
<tr>
<th>Subscription type (n=525)</th>
<th>Number of Sky’s subscriptions</th>
<th>% share of total Sky’s subscriptions</th>
</tr>
</thead>
<tbody>

<td>12.6%</td>
</tr>
</tbody>
</table>

133 The sample was nationally representative.
134 The margin of error for the sample who stated that Sky Ireland provided them with at least one service is approximately +/- 4.5%.
Survey results showed that 73.7% of Sky Ireland’s subscribers were subscribing to one service, 13.7% to two services and 12.6% to three services.

Figure A2 shows the estimated distribution of Sky Ireland’s subscriptions by type over the last two years. As of Q1 2017 the number of bundled subscriptions (double and triple play) accounts for 26.3% of all Sky Ireland’s subscriptions compared to 18.6% in Q1 2015.

Figure A2: Sky Ireland’s Distribution of Subscription Type
The following table lists Respondents who submitted data which was used to produce the Q1 2017 Quarterly Key Data Report.

**Table A3: List of Respondents**
